PRESS RELEASE

Cologne/HM Tegelen (NL), 13.10.2026

EWALS CARGO CARE OPTS FOR A BATTERY-POWERED TRUCK FROM HYLANE

Commercial vehicle hire company hylane is handing over a zero-emission lorry to the Dutch logistics firm Ewals Cargo Care. The fully electric MAN vehicle will be used for heavy goods transport across the border between Germany and the Netherlands.

This marks the first time that Ewals Cargo Care (ECC), a logistics company founded in 1906, has adopted electric lorry mobility on the road. Hylane's flexible rental model is ideally tailored to ECC's requirements. "Our aim is to make the use of zero-emission commercial vehicles as simple, flexible and predictable as possible for our customers," says Till Homrighausen, Director of International Key Account Management at hylane. "We are proud to now count one of Europe's leading logistics service providers among our customers and look forward to a successful partnership, even beyond this project." Hylane provides Ewals Cargo Care with easy access to a zero-emission lorry, with no investment risk for the customer but with transparent running costs. The company provides the lorry, including on-site driver training, vehicle registration, maintenance and repairs, insurance, taxes, tyre service, and return. Access to charging infrastructure and competitive energy costs are also part of the all-inclusive solution. Under a multi-year lease agreement, ECC pays only for the kilometres actually driven.

E-mobility is part of a smart mix

"We are delighted to be ushering in the future of electric mobility with MAN," says Joep Everts, Director of Trucking at ECC. "We are keen to see how the vehicle performs in day-to-day operations and how it can be integrated into our network and our sustainability strategy." For Ewals Cargo Care, the smart mix of transport modes and technologies is one of the most important factors to reduce CO₂ emissions. It is not about having just one solution, but about finding the right solution for every situation. The flexibility and reliability required for this can be found in the partnership with hylane.

MAN eTGX

The MAN eTGX 20.449, a low-liner tractor unit, has a range of approximately 500 kilometres with an output of 330 kW. The net battery capacity is 480 kWh with a charging capacity of up to 375 kW (500A). The vehicle is fitted with a sleeper cab and has a national maximum authorised mass of 41,500 kilograms with a kerb weight of 10,950 kilograms. The low fifth-wheel height is ideal for use with mega-trailers and volume-optimised transport.

About hylane

hylane is one of Europe's leading providers of zero-emission lorries – both hydrogen- and battery-powered. Founded in 2021 as Germany's first zero-emission commercial vehicle hire company, hylane supports businesses in decarbonising their lorry fleets. hylane's aim is to make road transport sustainable across Europe. To this end, the company provides zero-emission vehicles from various manufacturers through a flexible rental model. hylane handles vehicle procurement and registration, maintenance and repairs, insurance, access to energy supplies, and the management of regulatory requirements, including CO₂ certification. hylane makes the switch to climate-friendly lorries not only efficient and cost-effective, but also simpler. Its customers include leading companies from the logistics, retail and industrial sectors – amongst them Bosch, DHL, DSV, Hermes and REWE. hylane's shareholders are DEVK Versicherungen and Palladio Partners, Germany's largest independent infrastructure investor.

About Ewals Cargo Care

For over 120 years, Ewals Cargo Care has been helping businesses move forward. Founded in 1906 by Alfons Ewals, Ewals Cargo Care has grown from a small local transport company into a leading European logistics provider. ECC offers various logistics services, from multimodal transport to control tower supply chain solutions, ensuring efficient and sustainable freight transportation across Greater Europe. Utilising its fleet of patented Mega Huckepack XLS trailers and state-of-the-art logistics technologies, Ewals Cargo Care provides flexible and innovative supply chain solutions tailored to customers' needs. With decades of expertise, a strong network of partners, and a commitment to sustainability, ECC provides reliable and intelligent solutions. As part of its sustainability strategy and Net Zero by 2050 ambition, ECC is continuously expanding its use of multimodal transport and low-emission technologies, working with innovative partners to accelerate the transition towards more sustainable logistics.
